Anvay Mayekar

I'm an engineering student specializing in Electronics and Computer Science, focused on building practical hardware & software solutions.

Educational Background

Shah & Anchor Kutchhi Engineering College, Mumbai

2024 - Present

B.Tech in Electronics & Computer Science

Ramnivas Ruia Junior College

2021 - 2023

Higher Secondary School Certificate (HSC)

Dr. Antonio da Silva High School

2009 - 2021

Secondary School Certificate (SSC)

Skills

- Electronics
- Embedded Systems
- Robotics & IoT
- C & C++
- Python
- Java
- React Native
- Computational Mathematics

Certifications

Summer Internship Program

AICTE Idealab, SAKEC

Java Training

NPTEL (IIT-B)

C++ Fundamentals & Python

Infosys Springboard

Experience

Project lead & engineer on Project SIRA

ECS Dept. & AICTE IDEALab, SAKEC

Aug '25 - Present

Team Member

ISRO Robotic Challenge - URSC 2026

Jan '26 - Present

Summer Internship

AICTE IDEALab under Prof. Santosh Kamble

16 Jun - 16 Aug '25

Student Ambassador (Projects Team Member & Video Editor)

AICTE IDEALab, SAKEC

Aug '25 - Jan '26

Featured Projects

Project SIRA

Spider-Inspired Robotic Architecture - The Hexapod

A bio-inspired hexapod robot with a modular 3D-printed six-legged design and 18 DOF, developed at the college IDEA Lab. Built as a research platform for gait planning and autonomous locomotion on unstructured terrain.

Cancer Survival Analysis

Statistical Python tool for modeling cancer patient survival

A Python-based project modeling cancer patient survival using the exponential distribution. It applies Monte Carlo simulation, hypothesis testing, and bootstrap inference with publication-quality visualizations to provide a reproducible, mathematically grounded platform for survival analysis.

AVL Tree Visualizer

A Realtime AVL Tree Visualizer developed using Win32 API

A native C/Win32 application that visualizes AVL tree operations in real time, showing balance factors and rotations with smooth rendering and high-precision performance metrics.

UR5 Simulation

Robotic Arm Pick-and-Place Simulation in MATLAB

A MATLAB-based simulation of multi-object pick-and-place tasks with real-time control. Implements robot kinematics, object manipulation, and an interactive GUI for configurable objects and dynamic animation.

Minor Projects: Project Robo; Mega Matrix Mania (C); Space Invaders Game (Pygame); Ultrasonic Radar System with Arduino HC-SR04 and custom Java Swing interface.
